1. Introduction

This document covers all the Functionality Points and their mapping to the modules of the project Majlis-e-Shoora (Senate Automation). It contains:

- Project Overview
- Business Model
- Business Components
- System Architecture
- System Components
- Functionality Points
- Use Case Model [OO Analysis Only]

2. Project Overview

The project "Majlis-e-Shoora (Senate Automation)" is to fulfill the workflow and information needs of the users i.e. members and employees of Senate.

The project to be automated is part of a larger initiative of the government to provide greater access to government information and services, improve the internal efficiency of government operations, enhance public participation in the working of the government and make government more accountable to citizens.

Project Objectives:

Specifically, the Majlis-e-Shoora Automation project has three key objectives:

1. In a timely manner, provide the citizens with public access information on all proceedings of the Majlis-e-Shoora.
2. Provide members of the Senate and Senate access to information on the working of the house from their work as well as home.
3. Facilitate the functioning of the Senate and Senate Secretariats in a way that can increase their productivity and efficiency in managing the legislative process.

The modules covered in this project are divided into two main areas namely:

1. Core Legislative process.
2. Supporting Application.

The detail flow of information in the Senate in both the modules is given in the Functional Specifications; however, a brief overview is given below.

1. Core Legislative Processes

The Legislative Process forms the core workflow of the Senate and the Senate. This process encompasses a variety of sub-processes which are tightly integrated. These include:

❖ Bill Management System

Key legislative activity is introducing Bills and constitutional amendments. The Bill Management Processes track the entire lifecycle of all categories of Bills this is moved in the house.

Copyright © NetSol Technologies (Pvt.) Ltd. All rights reserved
Unauthorized copy or use of this document is strictly prohibited

❖ Resolution Management System

Resolutions encompass the decisions taken by the house. All steps involved in managing resolutions are covered under this set of processes.

❖ Motion Management

Motions of various categories are the mechanism for conducting business in the house. These motions will be tracked and managed using these sets of processes.

❖ Committee Management System

The Committee system is an integral part of the Legislative process, through which detailed and expert opinion is incorporated into the legislative activity. Management of Committees along with their activities is managed by these processes.

❖ House Debates Management System

All debates of the house are recorded verbatim during the session. An edited version of the debates is published soon after the close of the session. An entire branch is dedicated to managing the recording of these debates.

❖ Question Management System

A formal mechanism of questions and answers is provided for in the procedures of the two houses. These will be captured, tracked and indexed.

2. Supportive Applications

These applications will help support the legislative process by facilitating the legislators.

❖ Library Management

The library contains document archives, books, house debates and newspaper clippings.

❖ Document Retrieval and Management

The documents management is an all pervasive aspect of the application. All key documents will be managed via this application.

❖ Web Site

The Web Sites of the Senate and Senate will play a central role as the information hub. It will be the platform for disseminating information to the general public and thereby bringing transparency to the functioning of the Houses. Additionally it will be the portal for the legislators to help them perform their functions more effectively by letting them interact with the System remotely.

❖ Notice Branch

Notice branch deal with the attendance, issuance of the diary number and management of the seating plan.

Copyright © NetSol Technologies (Pvt.) Ltd. All rights reserved
Unauthorized copy or use of this document is strictly prohibited

❖ Transport Branch

Transport Branch maintains information regarding all the vehicles and scheduling their use. It also keeps the record of vehicle disposals, repairing, fuel consumption etc

❖ IPR Branch

IPR Branch maintains bio data of all the members; also it is responsible for arranging parliamentary visits to other countries and also handles incoming visits.

❖ Establishment Branch

Establishment Branch maintains bio data of all the employees.

3. Assumptions

4. Business Model

The purposes of business modeling are:

- To understand the structure and the dynamics of the organization in which a system is to be deployed (the target organization).
- To understand current problems in the target organization and identify improvement potentials.
- To ensure that customers, end users and developers have a common understanding of the target organization.
- To derive the system requirements needed to support the target organization.

To achieve these goals, the business modeling workflow describes how to develop a vision of the new target organization, and based on this vision define the processes, roles, and responsibilities of that organization in a business use-case model and a business object model

The business object model is an object model describing the realization of business use cases

5. Business Components

Following are the Business Components:

1. Notice Office
2. Question Management System
3. Bill Management System
4. Misc. Legislative Processes Management
5. Resolution Management
6. Motion Management
7. House Debate Management
8. Secretariat Budget
9. Videography Management
10. Committee Management
11. Inter Parliamentary Relations
12. Library Management System
13. Transport Management
14. Member Biographical Information
15. Employee Biographical System
16. Web Portal
17. Document Retrieval and Management
18. Member Salary
19. Members TA/DA
20. Employee Session Allowance
21. Employee Diet Charges

6. System Architecture

"ARCHITECTURE IS THE VEHICLE FOR STAKEHOLDER COMMUNICATION"

Among the various architecture approaches, there is a useful international standard that defines what information systems architecture means, the Reference Model for Open Distributed Processing (RM-ODP) [ISO 96]. We will cover it as one way to think about software architecture. This model is representative of mature software architecture practice today.
RM-ODP defines five essential viewpoints for modeling systems architecture:

1. Enterprise Viewpoint
2. Information Viewpoint
3. Computational Viewpoint
4. Engineering Viewpoint
5. Technology Viewpoint

The five viewpoints provide a comprehensive model of a single information system.

What is RM-ODP?

Open Distributed Processing (ODP):

- systems which support distributed processing despite:
    1. heterogeneity of components
    2. crossing organizational boundaries (autonomy)
- RM-ODP:

7.2 Committee Meetings

7.2.1 Ability to manage committee meetings.

7.2.2 Ability to maintain Committee, Meeting Date, Special Invitation, Venue, Room, Venue Phone, Time From, Time To, UO Note Date, Notice Date, Description, Meeting Agenda, Remarks, Minutes, Minutes of Meeting Prepare Date, Are Minutes Approved, Minutes of Meeting Approval Date, Nature of Meeting , Other Business, MOM Remarks, Report of the Meeting, Report Laying Date, Report Presentation Date and Attachments for meetings.

7.2.3 Ability to restrict scheduling of two or more meetings in same committee room at same time.

7.2.4 Ability to search meetings.

7.2.5 Ability to update meetings.

7.2.6 Ability to add participants for meetings who are not members of the committee.

7.2.7 Ability to mark attendance as present, not present and on leave for all the members including those who are not members of the committee.

7.3 Assigned Business

7.3.1 Ability to search business referred by the house.

7.3.2 Ability to submit reports for assigned business to the concerned branches.

7.4 Committee Reports

7.4.1 Ability to generate Change of Committee Applicatons

7.4.2 Ability to generate list of Total Meetings Against Committee

7.4.3 Ability to generate list of Chairperson Standing Committee

7.4.4 Ability to generate report for Occupancy of Commitee Rooms

7.4.5 Ability to generate List of Meeting Held

7.4.6 Ability to generate report for Total Reports Layed Against Committee

7.4.7 Ability to generate report for Reports Layed Against Committee

7.4.8 Ability to generate Committees Meeting Schedule

7.4.9 Ability to generate Notice of Meeting

7.4.10 Ability to generate list of Member Committee Membership

7.4.11 Ability to generate list of Senator Committee Membership By Province and Party
